## AGI SHIP

### Shipping and Rating Engine

#### AGI Worldwide Warehouse Solutions

This carrier-neutral shipping solution provides a single source for rates and transportation options to support effective and efficient decision making processes.

Taking advantage of lower LTL over parcel shipping, reviewing weight breaks, priorities, and etc. results in reduced shipping costs.

### Carrier-neutral Shipping and Rating System

AGI SHIP is a complete, integrated transportation management solution that automates the shipping process for parcels, LTL, and TL shipments in the US and Canada. AGI SHIP streamlines the identification of transportation carriers, obtains shipment pricing, ensures compliance with established shipping rules and regulations, and prepares documentation. This carrier-neutral shipping solution provides a single source for rates and transportation options to support effective and efficient decision making processes.

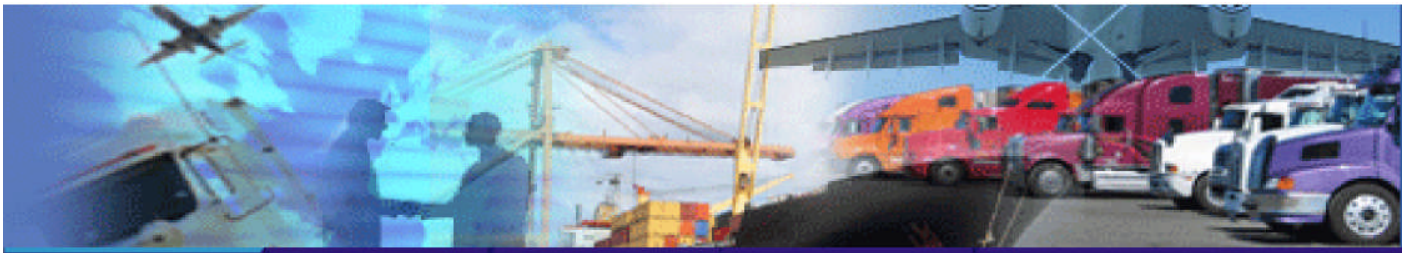

The AGI SHIP Solution allows your shipping department to choose from your list of approved carriers based on the lowest cost of service. The application provides the mechanism to set up all of your approved carriers (parcel and LTL) with their applicable rates and tracking numbers, providing your shipping personnel with the tools to make accurate shipping decisions at the best rate possible. Taking advantage of lower LTL over parcel shipping, reviewing weight breaks, priorities, and etc. results in reduced shipping costs.

No other Internet shipping solution gives you the option to integrate shipping management at this level. And because the shipping system is web-enabled, connecting all of these points in your enterprise is as simple as connecting to the web.

### AGI SHIP Features

- Weigh/Rate/Label
- Rate Shopping
- Multi-Weight Consolidation
- Electronic Manifesting
- Bill-As/Ship-As Options
- Historical Database
- Integration with AGI WMS

Place a parcel on an AGI SHIP connected scale and scan the shipment-related information, and AGI SHIP automatically does everything required to ship that package – weighs, compares rates and services of multiple carriers, automatically consolidates multiple packages that are being shipped to the same consignee, and generates carrier-compliant shipping labels. AGI SHIP automatically generates manifests from shipment-related information in the AGI SHIP database and provides options for billing freight charges depending on customer needs. AGI SHIP captures all information related to shipments in an historical database, including details about all parcels shipped such as weight, tracking number, customer reference number, carrier, destination, ship date, expected arrival date, and actual arrival date.

**From the SHIP station – perform a variety of functions, such as . . .**

- Packing / QA Verification
- Weight Verification (System Calculated vs. Actual)
- Split or Combine Shipping Cases
- Display Contents, List Order Detail
- Review Customer Shipping Data
- Select Service Levels
- Manage Multiple Carriers on One System
- Rate by Carrier, or Weight and Zone
- Take Advantage of Weight Break Rules
- Rates for the Individual Carton
- Rates for the Entire Order
